

Sound and seek!

Aim:

To identify whether it makes a difference whether we make a noise during hide and seek.

Prediction:

I thought that it would be

Method:

1) First we got into

Results:

	Test 1	Test 2	Test 3
silently			
calling partner			

Conclusion:

What did you learn from the experiment?

Was your prediction correct?

How did we make it a fair test?

Were there any unusual results? Why?

Why was it faster when we called our partner? What else did you notice?

What would you like to find out about sound?
